BP555 start to finish

Keep this by the machine. Better Pack 555e gummed tape dispenser.

1. **Fill the water bottle**
   Room-temperature tap water. Cap on tight. Bottle on its shelf, cap around the post in the tank.
2. **Fit the brush and tank**
   Shortest bristles towards the machine, lying flat. Tank locked onto its shelf.
3. **Set the Water Level Slider**
   Towards the machine for wetter tape, away for drier.
4. **Load the tape**
   Square-cut end, under the upper tape plate and feed wheel, up to the blade. Close the lid.
5. **Main Power Switch to I**
   Wait for the beep. The machine is ready.
6. **Set the Heater Control Dial**
   OFF to MAX. Halfway is enough in a heated building.
7. **Press a length**
   Tape feeds out wet and cut, straight away.
   12 → 24 → 36
8. **Adjust first, then the length**
   Half an inch more, less, or double. + → 24 = 24.5 in 2x → 24 = 48 in
9. **Repeat or feed by hand**
   REPEAT START same length again. Hold ↓ for an odd length.
10. **Check and seal**
    Tape evenly wet and oily to the touch. Half on one flap, fold, smooth from the middle out and down the ends.
11. **End of shift: Main Power Switch to O**
    This also clears Automatic Mode. Let the heater cool 30 minutes before touching it.

Automatic Mode

Next piece feeds out as soon as you tear one off. Up to three lengths, on a loop.

`Automatic models`

1. Press A. Beep, red light on.
2. Press a length, e.g. 24. Apply it.
3. Press REPEAT 2 ENTER to store it.
4. Repeat steps 2 and 3 for up to three lengths.
5. Press REPEAT START to run.

H pattern: store 24 6 6. Turn off with A. That clears the program.

Quick fixes

NO TAPE	Plugged in? Switch on **I**? Lid fully closed and square?
DRY TAPE	Slider towards the machine, refill the bottle, wash the brush.
JAMS	Upper tape plate in place, tape path clean and dry.
WRONG LENGTH	Every piece off? Feed wheel needs adjusting: call maintenance.

Hot heater. Hold it only by the grip tabs. Sharp blade: cut-resistant gloves.
